

CANDIDATE NAME

Profile Summary

- Data Engineer with 7+ years of experience designing, developing, and supporting enterprise-scale data platforms, ETL/ELT pipelines, cloud data warehouses, analytics solutions, and reporting systems.
- Experienced in building scalable data pipelines using SQL, Python, PySpark, BigQuery, Cloud Storage, Cloud Composer (Airflow), and modern GCP services.
- Strong expertise in data modeling, data quality frameworks, performance optimization, incentive compensation analytics, and business intelligence solutions.
- Proven ability to work with business stakeholders, architects, and product teams to translate business requirements into scalable cloud-based data solutions.

Technical Skills:

- **Cloud Platforms & Services:** Google Cloud Platform (GCP), BigQuery, Google Cloud Storage (GCS), Cloud Composer (Airflow), Pub/Sub, Dataproc, Dataflow, Cloud SQL, IAM & Service Accounts
- **Big Data & Data Engineering:** SQL, Python, PySpark, ETL, ELT, Data Warehousing, Data Modeling, Data Quality Frameworks, Data Governance, Data Migration
- **Orchestration & Workflow Automation:** Apache Airflow, Cloud Composer, Workflow Automation, Scheduling, Monitoring
- **DevOps:** Terraform, Cloud Build, CI/CD Concepts
- **Reporting & Analytics:** Power BI, DAX, Power Query, KPI Reporting, Dashboard Development

Work Experience:

Company Name	: Novo Nordisk
Designation	: Senior Data Engineer
Duration	: Jan 2023 – Present

Company Name	: Microsoft
Designation	: Senior Data Engineer
Duration	: Apr 2022 – Dec 2022

Company Name	: HCL Technologies Ltd
Designation	: Data Engineer
Duration	: Apr 2019 – Apr 2022

Project Summary:

Project I:

Senior Data Engineer | Novo Nordisk
Roles and Responsibilities:

- Designed and maintained end-to-end cloud data pipelines supporting Incentive Compensation, Sales Analytics, Master Data, and Enterprise Reporting solutions.
- Built ETL/ELT workflows using SQL, Python, BigQuery, Cloud Storage, and Cloud Composer (Airflow).
- Developed automated ingestion pipelines processing sales, target, territory, employee, and compensation datasets from multiple enterprise systems.
- Implemented Raw, Staging, and Curated data architecture with reconciliation, audit controls, and data quality validations.
- Developed Airflow DAGs for workflow orchestration, dependency management, monitoring, retry handling, and alerting.
- Built PySpark transformation workflows for data cleansing, standardization, deduplication, enrichment, and aggregation.
- Designed and automated Incentive Compensation pipelines including attainment calculations, eligibility validations, qualifier checks, multiplier mapping, and payout generation.
- Optimized BigQuery datasets using partitioning, clustering, query optimization, and performance tuning techniques.
- Implemented automated validation frameworks including schema validation, duplicate detection, threshold checks, reconciliation, and audit reporting.
- Developed curated datasets and semantic reporting models consumed by Power BI dashboards and executive reporting solutions.
- Worked closely with business stakeholders, architects, and product teams to translate compensation and reporting requirements into scalable technical solutions.
- Reduced manual QC effort by 40% through automation and reusable validation frameworks.
- Supported cloud migration and reporting modernization initiatives across enterprise reporting platforms.

Project II:

Senior Data Engineer | Novo Nordisk
Roles and Responsibilities:

- Designed and supported cloud-based Incentive Compensation pipelines processing sales, targets, employee, territory, and compensation plan datasets.
- Built event-driven ingestion architecture using GCS, Pub/Sub, and Airflow orchestration.
- Developed Airflow workflows for file validation, schema validation, data loading, reconciliation, monitoring, and failure recovery.
- Implemented Raw, Staging, and Curated data layers in BigQuery supporting enterprise reporting and compensation calculations.

- Developed PySpark transformation jobs on Dataproc for large-scale data cleansing, standardization, deduplication, and enrichment.
- Implemented attainment calculations, eligibility validations, qualifier checks, multiplier mapping, payout calculations, and compensation reporting logic.
- Developed automated data quality controls including count validation, duplicate detection, threshold checks, reconciliation reporting, and audit tracking.
- Optimized BigQuery workloads using partitioning, clustering, and query performance tuning techniques.
- Published curated compensation datasets to Power BI dashboards used by business stakeholders and leadership teams.

Project III:

Senior Data Engineer | Novo Nordisk

Roles and Responsibilities:

- Built automated pipelines supporting sales incentive calculations and payout processing. Processed sales, target, territory, employee, and compensation plan datasets.
- Automated attainment calculations, eligibility validations, qualifier checks, multiplier mapping, and payout generation.
- Developed reconciliation frameworks ensuring payout accuracy and audit compliance.
- Delivered Power BI dashboards supporting compensation operations and leadership reporting.

Project IV:

Senior Data Engineer | Microsoft

Roles and Responsibilities:

- Developed enterprise KPI reporting solutions and analytical datasets supporting leadership decision-making.
- Built SQL-based ETL workflows and automated data ingestion processes for enterprise reporting systems.
- Designed reporting data models and Power BI semantic layers for large-scale reporting requirements.
- Optimized SQL queries, data models, and reporting workloads improving dashboard performance by over 40%.
- Implemented data validation, reconciliation, and governance controls ensuring reporting accuracy.
- Collaborated with engineering and business teams to support cloud analytics initiatives and reporting modernization programs.
- Supported reporting automation, root-cause analysis, and performance optimization activities.

Project V:

Senior Data Engineer | Microsoft
Roles and Responsibilities:

- Developed cloud-based reporting solutions integrating CRM, HR, Sales, and Operational datasets.
- Built executive dashboards, KPI scorecards, and analytical data products. Automated reporting workflows reducing manual effort and improving reporting accuracy

Project VI:

Senior Data Engineer | HCL
Roles and Responsibilities:

- Developed ETL pipelines processing large-scale transactional and operational datasets using SQL and Python.
- Built data extraction, transformation, and loading workflows integrating multiple source systems.
- Designed analytical datasets and reporting structures supporting business intelligence solutions.
- Implemented data quality checks, reconciliation processes, and validation frameworks.
- Supported data preparation activities for analytics, reporting, and downstream data science use cases.
- Performed SQL performance tuning and optimization for reporting and data processing workloads.
- Collaborated with business users and technical teams to gather requirements and deliver scalable reporting solutions.

Project VII:

Senior Data Engineer | HCL
Roles and Responsibilities:

- Designed enterprise validation and reconciliation frameworks.
- Implemented duplicate detection, schema validation, threshold checks, audit controls, and data quality monitoring.
- Improved reporting reliability and operational efficiency through automation.

Education Qualification:

- Master of Computer Applications | IEC University / Group of Institutions
- Bachelor of Computer Applications | IEC University / Group of Institutions
