

Candidate Name

Professional Summary:

- Data Engineer with 9+ years of experience in the IT industry, specializing in designing, building, deploying, and maintaining scalable ETL pipelines for both batch and streaming data across on-premises and cloud platforms.
- Proficient in Data Warehousing, OLAP, and OLTP methodologies, with expertise in Hadoop, Pyspark, AWS, Databricks, Snowflake, and SQL. Skilled in Python programming and data manipulation using libraries like Pandas, alongside hands-on experience with databases such as Oracle, Postgres, Sybase, and HBase.
- Experienced in job workflow scheduling with tools like Control-M, Azkaban, Airflow, and Databricks Workflows, and knowledgeable in CI/CD pipelines using Jenkins and Terraform. Demonstrates a strong understanding of SDLC and Agile methodologies, complemented by excellent communication skills and a commitment to continuous learning and adapting to new technologies in both team and individual environments.

Technical Skills:

- Big Data
- AWS
- Azure
- PySpark
- Database Management & SQL
- Databricks & Delta Lake
- Postgres
- Snowflake

Working Experience:

Company Name : IT Services and IT Consulting
Designation : Senior Data Engineering Consultant.
Duration : July 2021 – Till Date

Company Name : IT Services and IT Consulting
Designation : Senior Data Engineer
Duration : Sept 2019 – July 2021

Company Name : Software Development Company
Designation : Data Engineer
Duration : April 2015 – Sept 2019

Project Summary:

Project – I

Client: Pharma Data Warehouse Management

Technical Stack: Big data, AWS, Databricks, Pyspark, Snowflake, Postgres, Python, Azkaban

Roles and Responsibilities:

- Implement end-to-end data pipelines and migrated existing systems from DBMS to Hadoop, enhancing data processing capabilities.
- Build a data warehouse on Hive with various layers, including operational data store, data warehouse, and data mart.
- Migrate Sybase stored procedures into Hive and PySpark scripts, ensuring seamless data integration and serve the reporting layer.

- Implement a framework to validate the data between hive and RDBS system post migration
- Played a vital role in migrating projects to AWS from On-premises, leveraging AWS services for efficient data processing.
- Implement a delta lake on Databricks with Medallion Architecture utilizing DLT and Autoloader for streamlined reporting.
- Migrate Datameer platform's import jobs and workbooks to Databricks notebooks and scheduled them using workflows using job clusters to leverage the workloads.
- Create notebooks to parse and flatten the complex Json structures and ingest the data into Bronze layer and scheduled the notebook using workflows.
- Worked on creating a Data warehouse on snowflake and implemented complex business logic using snowflake SQL and loaded the data into tables in multiple layers
- Schedule jobs using tools like Azkaban, Databricks Workflows to streamline data processing workflows and reduce manual intervention.

Project – II

Client: Health care

Technical Stack: AWS, Hadoop, Hive, Pyspark, Snowflake, Python, Scala, Unix, Control-M

Roles and Responsibilities:

- Played a vital role in migrating projects to AWS from On-premise, leveraging AWS services for efficient data processing.
- Created Lambda functions to process fixed width files and triggered the processing automatically using S3 events.
- Orchestrated the lambda functions using Step Functions with retry mechanism.
- Migrated the existing hive data to S3 and used Glue Crawler to create the metadata for querying the data from EMR and Athena.
- Offloaded the processed Data into Redshift to serve the reporting layer.
- Used secrets manager to store the credentials securely and used Boto3 library to work with AWS services.
- Created Glue jobs to perform ETLs and loaded the data from multiple sources to targets.
- Used Cloud watch logs and metrics to monitor the processes and take appropriate actions.
- Utilized Apache Spark applications for complex data processing tasks, focusing on transformations and aggregations with optimal performance.
- Scheduled automated jobs using tools like Control-M, Azkaban, Airflow, and Databricks Workflows to streamline data processing workflows and reduce manual intervention.
- Implemented CICD pipelines using Bamboo and Terraform.

Project – III

Client: Finance

Technical Stack: Hadoop, Hive, Sqoop, Spark, Oracle, Postgres, Hbase, Cron

Roles and Responsibilities:

- Extensively worked in designing and developing tables, views, procedures, and functions across various database systems.
- Created complex views and queries using analytical functions to meet client requirements, ensuring efficient data retrieval and reporting.
- Implemented a query builder tool which dynamically joins multiple data sources using a templated approach.
- Developed incremental Sqoop jobs for extraction of data from Source Databases into Staging Tables created on Hive.
- Implemented end-to-end data pipelines and migrated existing systems from DBMS to Hadoop, enhancing data processing capabilities.

- Fixing and providing workaround solutions for the tickets raised from Solution Analysts.
- Involved in troubleshooting technical issues, conduct code reviews, and enforce best practices.

EDUCATIONAL QUALIFICATION:

Bachelor of Technology in Electronics and Communication Engineering from West Godavari Institute of Science and Engineering (JNTUK University) during the period 2009-2013.
